LEARNING DIARY, REST MODULE

LEARNING DIARY

STYLE 3
29.5.2020

In this module, I learned express with mongodb, mongoose orm, and rest api. The tutorial was 1 hour long and it was a bit outdated. There was no error handling in any of the api calls. I had some trouble with a mongoose post request using Postman to push data into the book collection. The issue was that in the book.create function, the tutorial created a collection name book while I created a collection name books. I kept on getting a book.create function error message. However, using mongodb compass gui was very helpful instead of querying the mongo database server. It was a good experience getting to use postman. I had to look through a bit of the mongoose documentation for creating the schema.
